Meaningful Connectivity: Miami University in the 21st Century

Welcome

There are so many to welcome here today—Miami University students, faculty, staff, and alumni—plus our friends, special guests, emeriti, and state and educational leaders; those from our campus communities including Oxford, Middletown, Hamilton, Luxembourg, and West Chester; and many from Cincinnati and throughout Ohio. For my wonderful wife, Renate—we've been a terrific team for nearly three decades—and for my daughters, Ally and Michaela, and my parents, Phil and Dolores—your unwavering support means so much. Thank you for such a warm welcome.

Miami has a long history with ROTC units in the Navy, Air Force, and Army, so I extend a special welcome to our active duty United States Military, veterans, and ROTC cadets—please stand and be recognized. Within the Miami family, we also have several students who've been awarded the Purple Heart and decorated for acts of bravery. Our deepest appreciation goes to all of you for your courage in defending our country.

Today we open a new chapter in Miami's 207-year history. Our gathering celebrates the entire story of this amazing university—its proud past, its promising present, and its bright future that we'll shape together. The world needs Love, Honor, and our mission-driven vision to use our knowledge and skills with integrity and compassion to better our global society. We are One Miami, not only geographically on multiple campuses, but also historically, through three centuries.

After 103 days on the job—but who's counting?—what excites me most is how connection is so central to our life at Miami. I've known for a long time about Miami Mergers—Renate's sister and brother-in-law are a Merger, and they have been a terrific example of Love and Honor for as long as I've known them. I've also felt connected to Miami through the great Coach Ara Parseghian, a son of Miami who studied and started his career here and became part of Miami's Cradle of Coaches.

Just as the pioneers in Southwestern Ohio needed a college in the 19th century, just as the advocates for social justice in the 1960s needed Western College, which is now united with us, so Oxford, Ohio, the United States, and the world need Miami in the 21st century. Our long narrative propels us into the future on a trajectory of scholarship and service, with unsurpassed passion to build a community of excellence.

Each of our centuries has come with its own challenges, which we have successfully met. The 21st century is a time of rapid change and increased globalization. Despite great advances in areas like medicine and technology, we see widening gaps between rich and poor, inequalities and inequities, and sometimes-fearful reactions to rapidly evolving demographic, economic, and technological trends. At the very moment when we have become more instantly connected by communication than ever before in human history, we find ourselves deeply divided over culture, race, religion, and wealth distribution. Simultaneously, there are more opportunities and unlimited options for life and career paths.

The Four Mindsets: Where We Excel in Holistic Learning, Social Justice, Change Creation, and Virtuous Leadership

As we open this new Miami chapter today, I want to describe to you four mindsets that undergird meaningful connectivity: holistic learning, social justice, change creation, and virtuous leadership.

First, I'll describe these mindsets, sharing where Miami already excels; then I'll focus on how we will build on that excellence.

These 4 Universities Offer Unique Entrepreneurship Programs For College Students

Robyn D. Shulman

Contributor

I cover the intersection of education and entrepreneurship.

University: Miami University

Tuition: Ohio students entering Miami for the first time this summer or fall, the Miami Tuition Promise also applies, which will hold tuition and fees unchanged for four years. Trustees approved a rate of \$14,958 for them. For nonresident students entering Miami for the first time, trustees set the Tuition Promise undergraduate tuition at \$34,211.

Program: Ranked Top 25 in the country for nine years in a row, [Miami's Entrepreneurship Program](#) includes a major and minor within Miami's Farmer School of Business.

Highlights of the Program:

- A start-up/business plan competition for students (an investment of up to \$65,000 per student recipient per school year)
- Mentorship opportunities for entrepreneurs
- Sponsored off-campus networking opportunities
- An International Program in which students work with micro-entrepreneurs in developing areas
- Semester-long immersion with Interactive Media Studies in Silicon Valley
- Social Entrepreneurship track (ranked best social entrepreneurship program in the country)

In addition to the accolades and recognitions listed above, Miami's Entrepreneurship Program has tripled in size in the last five years and is ranked 3rd best program in the country for technology entrepreneurship. For those who really want to be immersed in an environment with like-minded students, there is a 250-person Living Learning Community in Entrepreneurship.

Forget Instagram, teen influencers are making thousands from online gaming

One teenage pro gamer notes that he's not only comfortable financially, he's spending less time working than he would at a regular 9-5 job.

Team LGD plays "Team Evil Geniuses" at an esports tournament in Vancouver on Aug. 25, 2018. Ben Frisa / Reuters

Gaming platforms provide access to this growing cohort of consumers, and brands are seizing the opportunity to engage. "We've seen a 30-50 percent growth in sponsorship growth alone [in 2018 over 2017], and brands like AT&T and Sour Patch Kids seize esports as a powerful marketing platform to get out their messages," said Brewer.

Doron Nir, CEO and co-founder of StreamElements, a production platform for livestreamers, says that in this nascent space, "advertising is dirt cheap, and you get a huge bang for your buck."

But professionalized esports isn't a category lacking in risks.

"As with any emerging market, this is a risky investment space. It is the Wild West, in many respects," said Glenn Platt, a professor of marketing and interactive media and director of the Armstrong Institute for Interactive Media Studies at Miami University in Ohio. "There is no consistent market leader, no coordination, no clear regulatory structure, no aggregating organizations like networks, leagues, etc. We can't even settle on what is 'doping,' let alone who can play pro and who cannot. Prize pools are variable and endorsements are risky. Games emerge quickly (like Fortnite) and can disappear just as fast. Investing in any market at this early stage is high risk, high reward, to be certain."

However, these early-stage kinks don't seem to be much more than that. "The industry has a momentum and fundamentals that no investor can deny," said Platt. "For the investor, the devil is in the details. The question is not whether esports is worth investing in – it is. The question is what part of the esports ecosystem do you want to bet on?"

Five organizations that are using big data to power digital transformation

Big data can be a great asset in achieving digital transformation. Here are five organizations that have used data science to boost their business.

By [Conner Forrest](#) | September 1, 2017 -- 13:08 GMT (06:08 PDT) | Topic: [Turning Big Data into Business Insights](#)

Big data has quickly become a key ingredient in the success of many modern businesses. Companies large and small are using structured and unstructured data to glean insights they can apply to boost productivity, cut costs, improve marketing efforts, and more.

As such, big data has become a foundational piece of many digital transformation efforts. By exploiting the power of big data, firms can more effectively target the digital transformation projects that will have the biggest impact on their bottom line.

4. Miami University

Many higher education institutions feel great pressure to prove the value of a pricey four-year degree, and those that work at these schools face increasingly high expectations for performance, according to Michael Kabbaz, senior vice president for enrolment management and student success at [Miami University](#).

However, big data is helping to eliminate a lot of that pressure. And, schools like Miami University are collecting a lot of it.

'Now, higher education measures just about everything across the entire student lifecycle, from the spectrum of students we recruit in high school, how we can better support them through the use of predictive analytics during their time on our campuses, and their graduation success and beyond,' Kabbaz said.

Predictive analytics is one tool that has helped Miami University break down silos and get a better view of its student body. Combining back office data with data from student-facing offices has given a much clearer picture of the lifecycle of a student, Kabbaz said.

"Predictive analytics can identify students who are having trouble paying their bills, and track students who have grade drops in certain areas or who are missing courses they need to graduate on time," Kabbaz said. "This information provides the institution an ability to better support students and do it sooner, prior to the student leaving the institution."

Improving student success, retention, and graduation rates are the key goals of Miami University's big data and digital transformation effort. Students have a lot of choices for where they will attend school, and Miami University is using data to ensure that it's providing the best education possible and remaining competitive in the market, Kabbaz said.

The value of data must be demonstrated clearly to any skeptics in the organization, said Kabbaz. For example, if university faculty members fear the data may harm the students, Kabbaz needs to show its potential for improving the way students are taught, and their overall experience at the school.

Today, understanding researcher performance is vital for both individual researchers and institutions as a whole. It can be a factor in getting tenure, creating research partnerships, attracting faculty and even developing better research. Librarians play a crucial role in this, providing not only the data, but the context for faculty and departments to better understand their impact in the research world.

Data can help researchers compare their work and productivity to others in their field, and also help them understand who is accessing and citing their work.

"It sometimes really surprises researchers not only how much use something gets, but what that use is coming from," says Kevin Messner, head of branch libraries and chemistry librarian at Miami University. "I've had people say, 'I had no idea that people in Japan would care about this!'"

Bringing value to research with data

Citation data and the related impact factors and H-indices are the classic data used to measure researcher performance, but other information can also improve understanding of that performance. Even simply finding the number of papers published by a given author, lab or department provides valuable insight into productivity.

Sustainability Leaders Will Continue Raise the Bar Rather Than Toe the Line

11/30/2016 09:19 am ET

BUSINESS BACKS LOW-CARBON USA

Miami University: Climate Change Education Critically Important

Doug Hammerle, Director of Energy Systems at Miami University shares how they not only serve as a model, but are working on educating the next generation of sustainability leaders; " Miami University is a public university – that implies responsible use of resources in addition to learning. For us it means smarter use of resources, and learning among staff and faculty as well as students. [Sustainability at Miami University](#) means reducing waste by increasing efficiency and being a model for innovative approaches to land, water and fuel use on campus. We want to preserve what we have and we want to grow leaders who will take sustainability to new areas and levels."

Conclusion

While there was a great deal of attention – and not to diminish the importance of the agreement signed at COP 21, it is important to note that in many ways the commitments made by both the private and public sectors in Paris (and reaffirmed and ratified over the last year) weren't tremendously additive to what was going on already. And as the economics and cost curves play out, the transition will only accelerate. That's borne out by companies like Unilever. Back in May, Unilever announced that its portfolio of Sustainable living brands were growing 30% faster than the rest of their business and

How to Explain Feminism in Terms Simple Enough for a Child

March 2, 2021 · 7 min read

Maya Angelou

From learning about the late Supreme Court Justice Ruth Bader Ginsburg to reading Maya Angelou and patronizing female-owned businesses, there are a variety of ways to celebrate Women's History Month with your child. But it never hurts to lay the groundwork for a bigger conversation by beginning with the basics, and in this case, that might look like defining feminism in terms that are easy enough for an elementary or junior high school-aged child to understand.

Although a majority of American women (61 percent) identify themselves as a feminist, according to a 2020 [Pew Research study](#), which surveyed women across all ages and education levels, confusion remains around what it means to use the identifier. We asked experts to breakdown what feminism is, what it isn't, and what it means to embrace it in their everyday lives so you can start the conversation at home as a family.

How to Explain What a Feminist Is

Feminism can feel like a big, daunting topic to cover, especially for a young child,

BY KIMBERLY HAMLIN 4 MINUTE READ

Last fall, I taught a new class called “#MeToo: A Cultural History” at Miami University. To my surprise, more than half of the 40 students in this humanities elective were business majors. Several had been inspired to take the class by the #MeToo movement. Others enrolled after having already experienced various forms of workplace sexual harassment. Why are young women entering the workforce in the 2020s still encountering pervasive sexual harassment, and what can we do about it?

Women Studies Scholars Worry Their Programs Are at Risk for Being Cut Amid Tightening Budgets

March 4, 2021 | :

f

+ 1

by Sara Weissman

Print

The COVID-19 pandemic is still shaking up higher education as budgets remain tightened and programs continue online. But in the midst of all this, women's studies scholars across the country are finding ways to celebrate Women's History Month and emphasize the importance of their research to today's most critical national conversations.

Women's studies scholars worry programs like theirs will take a hit as the pandemic leads to adjunct faculty and staff layoffs, pay cuts, furloughs and slashed programs across higher education.

A data brief from The National Association of Women's Studies details the many changes that have already confronted women and gender studies programs across the country. For example, the Women & Gender Center at Oregon State University is reducing programming as it anticipates a 10-15% budget cut in response to declining student enrollment. Purdue University merged women's, gender, and sexuality studies into a division with seven programs under one director.

But concerns about the longevity of women's studies programs aren't new,

Why don't Americans get regular mental health checkups? It's complicated.

Mental health is closely tied to our physical health, but it's not an integral part of medical system. Why?

Out-of-pocket costs for mental health care is often too high to be a realistic option for most patients. H111 Street Station / Getty Images/Blond Images

Jan. 22, 2018, 4:43 PM EST / Updated Jan. 22, 2018, 4:43 PM EST
By Nicole Spector

Sponsored Stories by Taboola

WE'RE MAKING PROGRESS, BUT WE HAVE WORK TO DO

Dr. Corriel, like every other doctor I consulted, believes that our society would benefit from annual mental health visits. And we have been making some progress – but it's been slow and stymied.

"Prior to the Affordable Care Act and even the [Mental Health Parity Act of 2008](#), mental health coverage was far less common and providers such as psychologists often worked without billing through insurance," says [Dr. Melissa Thomasson](#), Julian Lange Professor of Economics & Director of Graduate Studies at Miami University in Ohio. "Even though the ACA made mental health an 'essential health benefit,' the supply of providers has not kept up with the demand, so networks are not expanding as rapidly as they need to eliminate the shortage."

[Dr. Ramani Durvasula](#), a clinical psychologist and professor of psychology notes that there are emerging models of integrated primary care that "co-locate mental health services right there and then at the point of physical health service delivery," but adds that these models are "infrequent and there is still pushback."

It could be a while before we see positive change here, especially if we don't evolve our societal conversation around mental health.

"If we had yearly mental health evaluations, we would have to vastly change the conversation around mental illness," says therapist [Rachelle R. Henry](#), PhD, a marriage and family therapist in New York City. "In short, yearly mental health evaluations will force a normalization of mental illness in a culture which perpetuates the idea that a lack of mental health functioning is a rare, personal problem."

NO REGRETS

Psychology professor (and recent bride) Amy Summerville shows brides how to make the right planning choices.

Few brides think much about science when planning a wedding, other than their chemistry with their soon-to-be-spouse. As both a recent bride and a professor who directs the Miami University Regret Lab and teaches classes on decision-making, I know that research from decision and psychological science offers a number of strategies for how to feel great about your wedding-planning choices so you'll enjoy your day to the fullest. Here, some tips.

Trying to find "the absolute best" will make you less happy. People can use two strategies in making a choice: trying to pick the supremely perfect option or trying to pick an option that meets all of their requirements and standards. Research by psychologist Dr. Barry Schwartz and colleagues has found that the latter strategy actually seems

to make people happier—after all, you can never be absolutely sure that there's not another gown, cake, venue, fill-in-the-blank somewhere out there that might not have been a tiny bit better than what's in front of you. But second-guessing can sap your energy, time and spirit. When I found a dress that I loved and that fit my budget, I bought it, reminding myself that while there were probably a dozen other ivory lace sheaths I could consider, I'd likely wind up less happy than I was right then.

Fewer choices are more satisfying. Dr. Sheena Iyengar of Columbia University did a study where people could sample either a few flavors from a brand of jam, or all the brand's flavors. People who had fewer choices to consider wound up liking the jam more

and were more likely to purchase a jar, whereas people who had multiple choices were too overwhelmed to feel confident in a decision. I chose to work with a wedding coordinator in no small part so that she could narrow down the options for me. Rather than having to consider every florist in the city, I just met with the three she suggested. The differences between them seemed clearer and I was much more confident in my choice than if I'd had to decide between 10 times as many.

Big choice? Take your mind off of it. Researchers in the Netherlands looked at different approaches to important decision-making and found that people who stepped away from making an on-the-spot choice are ultimately more satisfied with their final decision.

HINT: Turning off the decision-making wheels to pursue something else like taking a walk will open up "unconscious thinking," a way of processing feelings that can lead to better outcomes.

Why "The One That Got Away" Hurts So Much — And How To Move On

By LEA ROSE EMERY | Feb 23 2018 | f

Paolese/Fotolia

If there's one person in your life who you've never managed to get over, you know how hard it is to have the "one that got away". Although sometimes the one that got away can be a nothing more than a wistful memory, for other people it can become toxic — and even obsessive. They focus on that person, compare everyone else to that person, and never really let themselves move on. So why is that one person that got away so difficult to shake?

Well, according to Amy Summerville, Ph.D., an Associate Professor in the Department of Psychology at Miami University and Director of Miami's Regret Lab, the answer is in the research. And evidence shows that, for some people, they regret things that might have been — and for others it's things that *did* happen, but didn't go according to plan. "In a representative sample of Americans, people's biggest life regrets were actually evenly split between actions (things they did, but wish they hadn't) and inactions (things they didn't do, but wish they had)," Summerville tells Bustle. "There is some evidence that regrets of inaction occur more in the long term or last longer, in part because our minds treat our unmet goals as a sort of mental 'to-do' list and over time we're more able to remember things we wish we had done than the mistakes we actually made."

Mirena® and Kyleena® prevent pregnancy for up to 5 years.

(P.D.)

* If you have persistent pelvic or stomach pain or if Mirena or Kyleena comes out, tell your healthcare provider (HCP). If Mirena or Kyleena comes out, use back-up birth control. Mirena or Kyleena may attach to or go through the uterus and cause other effects.

What to Know About the AstraZeneca Vaccine Controversy

Written by [Julia Ries](#) on December 4, 2020 —
Fact checked by Michael Crescione

ADVERTISEMENT

A dosing error has put a spotlight on the AstraZeneca COVID-19 vaccine trial. Nathan Stirr/Getty Images

- AstraZeneca announced that its vaccine is 70 percent effective, but a major dosing error during the trials may have affected the overall efficacy.
- Some clinical trial participants were mistakenly given half a dose rather than a full dose in their first round of shots.
- Researchers discovered that those who were given the weaker dosage produced a better immune response.

AstraZeneca's COVID-19 vaccine is thought to be one of the biggest game changers when it comes to getting a handle on the pandemic.

Unlike some [other vaccines](#), AstraZeneca's vaccine, which is given in two doses a month apart,

ADVERTISEMENT

“Small mistakes are common, but giving thousands of participants the wrong dose unintentionally is not a common mistake. Time will tell whether this particular mistake leads to a discovery, but at this point in time there is a lot of uncertainty around the findings,” said [Dr. Philip Smith](#), an assistant professor in the department of kinesiology and health at Miami University in Ohio.

A photograph showing a woman with brown hair, wearing a black face mask and a blue and white striped shirt, sitting and receiving a vaccine. A healthcare worker in blue scrubs, a white face mask, and gloves is administering the vaccine into her upper arm. The background is a blue curtain. A small table with a blue tray is visible in the foreground.

A Pay-To-Play Scenario

“One danger of a lack of centralized guidelines is that we end up in a pay-to-play scenario. Government agencies may prioritize distribution to companies or industries with the greatest resources to lobby for vaccines, rather than those with the greatest need from public health or economic perspectives,” observed [Dr. Philip Smith](#), a public health expert and assistant professor at Miami University in Ohio.

Vaccine nationalism, as a concept, is basically selfishness in the name of patriotism. “Vaccine nationalism means putting your own nation’s vaccine needs ahead of others, to the detriment of others,” explains **Phillip Smith**, an epidemiologist and professor of public health at Miami University in Ohio. And, as Smith explains, vaccine nationalism comes in many forms. One example is a nation not sharing their vaccine developments with other nations, as Russia did when they initially withheld scientific data about their Sputnik 5 vaccine. While Russia’s vaccine program is definitely suspect in terms of efficacy, who knows what scientists could have learned if that country had been willing to share their data.

Social Media Is Traumatizing Us More Than We Realize

Here's how constant COVID-19, racial injustice and political posts can alter your brain and body, plus advice on fixing it.

By Stephanie Barnes

02/22/2021 05:45am EST | Updated March 9, 2021

Katie Day Good, an assistant professor of strategic communication at Miami University and the author of “Bring the World to the Child: Technologies of Global Citizenship in American Education,” said social media can be a double-edged sword when it comes to understanding tragedy or humanitarian crises. While these platforms can help us to better understand issues plaguing others and “prompt us to adopt behaviors and advocate for policy solutions that bring positive change,” there is also the issue of becoming impervious to tragedy because we see so much of it, she explained.

How to Raise Resilient Kids

Getty Images

Parents should not expect their kids to naturally just be resilient; it's a skill that can be learned and practiced. "Helping youth develop resiliency isn't something parents can do in one day or with one conversation," says Anthony James, director of the family science program at Miami University in Ohio. "It's something that happens over time through dynamic parent-child interactions as parents make intentional decisions based on what abilities they desire to see their children exhibit over time."

In a climate that is increasingly dismissive of liberal arts disciplines in favor of a shift to science and innovation, Miami University President Gregory Crawford has found a model in which they can coexist. We sat down with Crawford to get his insight into how focusing on liberal arts impacts not just student success, but promotes greater diversity in staff and faculty hires, and even fundraising.

EDUCATION DIVE: Miami U has a particular emphasis and infusion of liberal arts, especially in the STEM disciplines. Why is that so important, and how did you begin this journey of incorporating a field of study the country is kind of pushing away from?

Editor's note: Gregory Crawford is the president of Miami University in Ohio.

Today's college students may hold more than a dozen jobs in their careers – some that do not exist today and some that will disappear before they retire. Today's universities, in addition to educating minds, must instill mindsets, ways of thinking that can be applied across disciplines and industries to unleash a new generation of leaders and innovators equipped to address the pressing issues of our time and the future.

A dynamic and disruptive economy is accelerating change at a pace never before seen. Yes, graduating with required skills and fixed knowledge is still important. But today's graduates also need to be empowered with an agile, global, and inclusive mindset – able to assess needs, leverage or invent tools, and solve complex problems.

OVERVIEW OF COLLEGE RESOURCES FOR STUDENTS WITH DISABILITIES

PAGE NAVIGATION

Prospective college students with disabilities will find that many campuses are equipped with offices and services that address accessibility, accommodation, and assistive technology for a diverse range of needs. Student services offices and disability coordinators at many colleges work to make campuses inclusive environments through specialized advocacy, support, and academic services.

OF 2,563,000 UNDERGRADUATE STUDENTS IN THE U.S., APPROXIMATELY 11.1% OF ALL UNDERGRADUATES ENROLLED, HAD A DISABILITY IN THE 2011-2012 SCHOOL YEAR.

The increased visibility of these resources makes college a very compelling option for people with disabilities. In 2013, the [National Center for Education Statistics](#) reported that roughly 2,563,000 undergraduate students in the U.S., approximately 11.1% of all undergraduates enrolled, had a disability in the 2011-2012 school year. In addition to campus-based resources, students with disabilities are also protected by state, federal, and local laws prohibiting discrimination and requiring equal levels of access to academic services, environments, and resources. This guide explains your legal rights as a student with disabilities, both physical and learning disabilities, and the campus resources that can provide you with assistive services and tools. Additionally, we list a number of sites, apps, and software resources designed to aid students with specific types of disabilities, whether physical impairments or learning disabilities.

Andy Zeisler - Director of Student Disability Services, Miami University

J. Andrew Zeisler (M.Ed.) is the Director of Student Disability Services (SDS) for Miami University's Oxford campus. In his 30th year of service to the University, Andrew has been involved with Miami's efforts towards enhancing inclusion and accessibility for over 3 decades.

Currently, Andrew serves on the Accessible Technology Committee, the President's Council on Diversity and Inclusion, University Senate, and manages an amazing team of professional staff in SDS who serve almost 9% of Miami's student body.

Andrew is a member of the Association of Higher Education And Disability (AHEAD), its Ohio affiliate group OH-AHEAD, and Chairs Miami's Annual Kate Welling Disability Awareness Lecture committee.

The Myaamia people once occupied the lands of present-day Indiana, Illinois, Ohio, Wisconsin, and Michigan before they were forcibly relocated “to lands lying west of the Mississippi in what would become the state of Kansas, and then from Kansas to Indian Territory, which later became the state of Oklahoma,” according to their [official history](#).

Today, their descendants, officially recognized as the Miami Tribe, are largely concentrated in an area of northeastern Oklahoma which shares their name. But through the generations, the tribe’s language and some of its history and cultural practices got lost.

Daryl Baldwin of the Myaamia Center says ‘indigenous communities are in transition’ as are their languages

Language revitalization needs to move from the rhetoric of dying, extinct languages and focus more on Native communities in transition, says a linguist and cultural preservationist.

“Indigenous communities are in transition,” said Daryl Baldwin, director of the [Myaamia Center](#) at Miami University. “We’ve been in transition for many, many years, whether it’s the ways in which we educate our youth, the political process – our cultures have been transitioning and our languages will transition.”

For the tribal communities whose last speakers are dying, turning to documentation is an option, and there’s a lot the tribal communities can do, Baldwin said.

B-school diversity course answers employer expectations

The mandatory "First Year Integrated Course" at the Farmer School of Business at Miami University in Ohio examines diversity from a variety of angles.

By: [mzalaznick](#) | Issue: [January/February, 2019](#)
January 23, 2019

The mandatory "First Year Integrated Course" at the Farmer School of Business at Miami University in Ohio examines diversity from a variety of angles.

Businesses demand that college graduates thrive in diverse workplaces and collaborate productively with colleagues who have different mindsets for solving problems. To that end, the [Farmer School of Business at Miami University in Ohio](#) introduced a course requirement that administrators believe is distinctive, if not one of a kind, among similar institutions. For the past three years, all first-year students have examined diversity from a variety of angles in the mandatory "First Year Integrated Course."

"Diversity is a two-sided coin," says Tim Greenlee, senior associate dean of the Farmer School and a professor of marketing. "We all have demographic diversity, but we can also acquire experiential diversity along the way."
